

AS/NZS 4777.2:2020
(Incorporating Amendment No. 1)

Australian/New Zealand Standard™

Grid connection of energy systems via inverters

Part 2: Inverter requirements

This is a free 5 page sample. Access the full version online.

AS/NZS 4777.2:2020

This Joint Australian/New Zealand Standard™ was prepared by Joint Technical Committee EL-042, Renewable Energy Power Supply Systems and Equipment. It was approved on behalf of the Council of Standards Australia on 27 November 2020 and by the New Zealand Standards Approval Board on 10 December 2020.

This Standard was published on 18 December 2020.

The following are represented on Committee EL-042:

- Australasian Fire and Emergency Service Authorities Council
- Australian Energy Market Operator
- Australian Industry Group
- Australian PV Institute
- Better Regulation Division — NSW Fair Trading
- Clean Energy Council
- Clean Energy Regulator
- Communications, Electrical and Plumbing Union — Electrical Division
- Consumer Electronics Suppliers Association
- Consumers Federation of Australia
- CSIRO
- Electrical Compliance Testing Association of Australia
- Electrical Regulatory Authorities Council
- Electrical Safety New Zealand
- Electricity Engineers Association of New Zealand
- Energy Efficiency and Conservation Authority of New Zealand
- Energy Networks Australia
- Engineers Australia
- Fire and Emergency New Zealand
- Institute of Electrical and Electronics Engineers
- Institute of Electrical Inspectors
- Joint Accreditation System of Australia and New Zealand
- Master Electricians Australia
- National Electrical and Communications Association
- Office of the Technical Regulator, SA
- Smart Energy Council
- Solar Energy Industries Association
- Sustainable Electricity Association New Zealand
- Sustainable Energy Association
- University of New South Wales
- Vector, New Zealand
- Wellington Electrical Association
- WorkSafe New Zealand

This Standard was issued in draft form for comment as DR AS/NZS 4777.2:2020.

Australian/New Zealand Standard™

Grid connection of energy systems via inverters

Part 2: Inverter requirements

Originated in Australia in part as AS 4777.2—2003 and AS 4777.3—2003.
Second editions 2005.
Jointly revised, amalgamated and redesignated as AS/NZS 4777.2:2015.
Fourth edition AS/NZS 4777.2:2020.
Reissued incorporating Amendment No 1 (October 2021).

Preface

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-042, Renewable Energy Power Supply Systems and Equipment, to supersede AS/NZS 4777.2:2015, *Grid connection of energy systems via inverters, Part 2: Inverter requirements*. AS/NZS 4777.2:2015 will also remain current for 12 months after the date of publication of this Standard and after this time they will be superseded by AS/NZS 4777.2:2020. Regulatory authorities that reference this Standard in regulation may apply these requirements at a different time. Users of this Standard should consult with these authorities to confirm their requirements.

This Standard incorporates Amendment No. 1 (October 2021). The start and end of changes introduced by the Amendment are indicated in the text by tags including the amendment number 1.

The objective of this Standard is to specify minimum performance and safety requirements for the design, construction and operation of inverters intended for grid connection of energy systems.

This Standard is part of a series on the grid connection of energy systems via inverters. The series is as follows:

AS/NZS 4777.1, *Grid connection of energy systems via inverters, Part 1: Installation requirements*

AS/NZS 4777.2, *Grid connection of energy systems via inverters, Part 2: Inverter requirements* (this Standard)

The differences between this and the previous edition include but are not limited to the following:

- (a) Revision of sustained frequency response.
- (b) Revised set-points and limits to match electricity distributor and grid operator requirements.
- (c) Revision of provisions for demand response and power quality response modes.
- (d) Inclusion of requirements for electrical safety of non-PV energy sources in accordance with IEC 62477-1.
- (e) Inclusion of requirements for improved withstand capabilities including multiple voltage disturbances, rate of change of frequency and voltage phase shift.
- (f) Inclusion of requirements for measurement system accuracy and functional prioritization.
- (g) Inclusion of requirements for stand-alone inverters.
- (h) Inclusion of requirements for generation limit and export limit control function.
- (i) Revised and expanded testing procedures.

The following documents were used for information and guidance in the preparation of this Standard to ensure that features and requirements were aligned with international developments.

IEEE 1547-2018, *IEEE Standard for Interconnection and Interoperability of Distributed Energy Resources with Associated Electric Power Systems Interfaces*

VDE-AR-N 4105:2018-11, *Generators connected to the low-voltage distribution network — Technical requirements for the connection to and parallel operation with low-voltage distribution networks*

Standards Australia thanks the International Electrotechnical Commission (IEC) for permission to reproduce definitions from IEC Electropedia available from www.electropedia.org and IEC 62109 Parts 1 and 2. These definitions are copyright of IEC, Geneva, Switzerland. All rights reserved. Further information on the IEC is available from www.iec.ch. The terms “normative” and “informative” are used in Standards to define the application of the appendices to which they apply. A “normative” appendix is an integral part of a Standard, whereas an “informative” appendix is only for information and guidance.
