

Electricity Network Safety Management System Statement of Commitment

Endeavour Energy is a commercially focused electricity distribution business that strives to provide customer-oriented services. We are an electrical distribution network business, responsible for the safe, reliable and efficient supply of electricity to over one million customers or 2.5 million people in households and businesses across Sydney's Greater West, the Blue Mountains, Southern Highlands, Illawarra and the South Coast. With a regulatory asset value of more than \$6 billion, our network spans 24,818 square kilometres and is made up of more than 433,000 power poles, over 211,000 streetlights, 186 major substations and almost 33,000 distribution substations connected by almost 60,000 kilometres of underground and overhead cables.

Endeavour Energy is committed to a high standard of safety, reliability, security, workmanship and statutory compliance of its network infrastructure. The company has implemented an Electricity Network Safety Management System (ENSMS) in accordance with AS5577 as required by the Electricity Supply (Safety and Network Management) Regulation 2014 (NSW) (the Regulation), to enable the safe design, construction, commissioning, operation, maintenance and decommissioning of its electricity network.

Specifically, and as required by the Electricity Supply (Safety and Network Management) Regulation 2014 (NSW) (the Regulation), the ENSMS will enable the achievement of the following objectives:

- the safety of members of the public;
- the safety of persons working on networks;
- the protection of property (whether or not belonging to a network operator);
- the management of safety risks arising from the protection of the environment (for example, preventing bush fires that may be ignited by network assets); and
- the management of safety risks arising from loss of electricity supply.

Guy Chalkley
